

Drop/settle predicate anatomy

Final speed, floor breach, and descent terms are checked together.

INITIAL HEIGHT

$$z_0 > z_f$$

SETTLE WINDOW

$$\|v_T\| \leq \epsilon$$

ACCEPT TERMS

● speed ok

● height ok

● descent ok

What this shows

How one vertical probe becomes velocity, height, and descent clauses.

What this does not show

It does not certify behavior outside the recorded diagnostic scene.
